PROFESSIONAL SUMMARY

Full Stack Developer with **3.5+ years of hands-on experience** working on enterprise-grade, cloud-native applications in a professional product environment. Experienced in **ASP.NET Core microservices** and **React 18 + TypeScript** frontends running on **Azure**. Comfortable working across distributed systems, multi-tenant SaaS codebases, event-driven messaging with RabbitMQ & MassTransit, and real-time geospatial UIs. Familiar with CI/CD pipelines, shared NuGet/npm package development, gRPC inter-service communication, and production observability using Serilog, Elasticsearch, and Dynatrace. A collaborative team player who takes ownership of tasks, writes clean code, and continually deepens understanding of backend and frontend systems.

TECHNICAL SKILLS

Languages	C#, TypeScript, JavaScript, SQL, Protocol Buffers (Protobuf)
Frontend	React 18, Redux / Redux Toolkit, React Router 6, Material-UI, AG Grid Enterprise, Leaflet.js, Pixi.js (WebGL), DevExtreme, Formik, Yup, i18next, Axios, Webpack 5, Babel
Backend	ASP.NET Core (.NET 8/9/10), Web API, gRPC / Grpc.AspNetCore, MassTransit, SignalR, AutoMapper, Swagger / OpenAPI
Databases & ORM	SQL Server, PostgreSQL + PostGIS (spatial), MongoDB, Entity Framework Core, Dapper
Cloud & DevOps	Microsoft Azure (Service Bus, App Configuration, Managed Identity, Azure SQL), Docker, Docker Compose, Azure DevOps Pipelines (YAML), Kubernetes-ready containerisation
Architecture	Microservices, Clean Architecture, Domain-Driven Design (DDD), Event-Driven Architecture, Multi-Tenant SaaS, CQRS patterns
Auth & Security	OAuth2, OpenID Connect, Microsoft Entra ID (Azure AD), JWT, Microsoft.Identity.Web, Claims-Based Authorisation
Messaging	RabbitMQ, Azure Service Bus, MassTransit (abstraction layer)
Observability	Serilog (structured logging), Elasticsearch sink, Dynatrace APM, ASP.NET Core HealthChecks, Correlation IDs
Testing & Quality	xUnit, Moq, Coverlet (code coverage), SonarQube, StyleCop.Analyzers, ESLint, Prettier, Husky (git hooks)
Other Tools	NuGet (Azure Artifacts), npm packages, Monaco Editor, DevExpress Reporting, NetTopologySuite / GeoJSON

AI-DRIVEN DEVELOPMENT

Actively integrates AI tools and automation into day-to-day development workflow, improving productivity and code quality across both frontend and backend tasks.

- **Claude AI (Anthropic)** — Uses Claude for exploring unfamiliar codebases, drafting and reviewing complex logic, debugging tricky issues, and generating boilerplate for ASP.NET Core services and React components. Proficient in prompting Claude effectively to accelerate feature development.
- **GitHub Copilot** — Proficient in using Copilot within VS Code and Visual Studio for intelligent code completions, inline suggestions, and reducing repetitive coding across C#, TypeScript, and React. Uses Copilot to speed up writing unit tests, API controllers, and Redux slices.
- **Power Automate Desktop** — Applied Power Automate Desktop to identify and automate repetitive manual workflows, reducing manual effort and human error. Experienced in building desktop flows for task automation without writing complex scripts.

PROFESSIONAL EXPERIENCE

Software Engineer – Full Stack (.NET + React)

Mar 2022 – Present

[Aptean](#) | Bangalore, India

- Worked across **ASP.NET Core microservices** in Paragon ARS — an enterprise route optimisation SaaS platform — gaining hands-on experience with Clean Architecture and Domain-Driven Design in a large-scale production codebase.
- Developed features on the **React 18 + TypeScript** frontend, working with Redux Toolkit for state management, **AG Grid Enterprise** for high-volume data grids, and **Leaflet.js + Pixi.js (WebGL)** for real-time interactive route mapping.
- Worked with **gRPC inter-service communication** using Protocol Buffers, gaining practical experience with contract-first API design and strongly-typed cross-service messaging.
- Contributed to a **multi-tenant SaaS platform** using MongoDB for tenant data isolation and **Azure Service Bus + MassTransit** for reliable event-driven async messaging.
- Developed and maintained **internal NuGet packages** (authentication, correlation, logging, gRPC clients, compression, audit) published to Azure Artifacts, supporting consistent standards across backend services.
- Implemented **OAuth2 / OpenID Connect** flows using Microsoft Entra ID, working with JWT token validation and Claims-based authorisation across multiple services.
- Worked with **PostgreSQL + PostGIS** for road network spatial data and geographic queries, gaining experience with geospatial data modelling and GiST-indexed lookups.
- Worked with **multi-stage Docker builds** and Docker Compose for containerisation and local environment orchestration across microservices.
- Contributed to **Azure DevOps CI/CD pipelines** (YAML-based) including SonarQube quality gates, FOSS security scanning, NuGet authentication, and automated code-coverage reporting.
- Worked with **Serilog structured logging** integrated with Elasticsearch and Dynatrace APM sinks, gaining practical observability and distributed tracing experience.
- Contributed to **reactjs-common** — a shared React component library — and TypeScript/npm packages used across frontend teams for consistent UI patterns.
- Worked on **real-time SignalR features** including live route tracking, driver status updates, and dispatcher alerts within the logistics console.

KEY PROJECTS

Paragon ARS – Route Optimisation Platform

Worked as part of the team building an enterprise multi-tenant SaaS platform for logistics route planning and real-time dispatch.

Contributed across backend microservices (ASP.NET Core), geospatial APIs (PostGIS), and the React frontend with WebGL map rendering. Stack: .NET 9, React 18, Azure, gRPC, RabbitMQ, PostgreSQL, SQL Server, Docker.

Internal NuGet Package Ecosystem

Developed and maintained shared NuGet packages covering auth, logging, correlation, gRPC clients, and data access — published to Azure Artifacts and used across all backend services. Gained strong experience with package versioning, dependency management, and API design.

reactjs-common – Shared UI Component Library

Contributed to a shared TypeScript React component library (Atoms pattern) published to npm, providing reusable UI primitives consumed across multiple frontend teams.

Tenant Management Service

Worked on the multi-tenant management service using MongoDB for tenant isolation, Azure Service Bus for event propagation, and gRPC for inter-service communication, including a communications templating module for email/SMS notifications.

INDEPENDENT PROJECTS

Ride Booking System (Uber-like Backend)

github.com/monishpidugu/monish-project-uber-lite

A self-built backend for an Uber-like ride booking application developed independently to strengthen understanding of **system design** and **Clean Architecture**. Structured across four layers — API, Application, Domain, and Infrastructure — with strict separation of concerns using the **Repository Pattern**, **Dependency Injection**, and **Entity Framework Core** (Code First) backed by **SQL Server**. Implements a full ride lifecycle state machine (Requested → Accepted → InProgress → Completed) with a nearest-driver matching algorithm using distance-based sorting. Independently designed a production-grade scalable architecture covering **API Gateway**, **Redis caching**, **Load Balancer**, database read replicas, and a **Message Broker** for async task handling — going beyond the current implementation to think through real-world scale. Stack: **.NET Core Web API**, **EF Core**, **SQL Server**, **Swagger/OpenAPI**.

EDUCATION

Bachelor of Technology – Computer Science & Engineering

2018 – 2022

REVA University | Bangalore, India | CGPA: 8.82

CORE COMPETENCIES

- | | | |
|--|-------------------------------------|---|
| • Distributed Microservices Design | • Cloud-Native Development (Azure) | • React / TypeScript SPA Development |
| • REST & gRPC API Design | • Multi-Tenant SaaS Architecture | • Event-Driven Systems (RabbitMQ / Azure Service Bus) |
| • Geospatial & Mapping (PostGIS / Leaflet) | • CI/CD & DevOps (Azure DevOps) | • Auth & Identity (OAuth2 / OIDC / JWT) |
| • Performance Optimisation & Observability | • Code Quality & Clean Architecture | • Technical Mentoring & Code Review |
